Freeport-McMoRan Inc.
Environmental Policy

Freeport-McMoRan Inc. ("FCX") recognizes that mining impacts the natural environment. Our goal is to conduct our mining and processing operations with responsible environmental stewardship approaches throughout the mining and processing life cycle. We plan and conduct our operations in a manner that seeks to optimize the economic use of resources while minimizing adverse environmental impacts, with a focus on climate, water, nature and biodiversity, air, tailings, waste, mine closure and reclamation. Through integration of our Environmental Policy with our Tailings Management, Human Rights and Social Performance Policies, we aim to respect the rights of others and interests of all stakeholders in our environmental performance.

FCX is committed to:

- Operating our facilities in compliance with applicable environmental laws and regulations and applying internationally recognized management practices in circumstances where we believe that applicable laws and regulations are not sufficiently comprehensive;
- Striving to prevent pollution, minimize adverse environmental impacts, and continually improve the environmental performance of our operating sites through the implementation of ISO 14001 and other risk management systems, processes, and strategies;
- Safely and responsibly managing our tailings and non-tailings waste;
- Progressing our climate strategy of reduction, resilience, and contribution;
- Striving to maximize water use efficiency across each of our operations and, where appropriate, seeking to collaboratively engage with stakeholders on responsible water stewardship;
- Operating in a manner that respects legally designated protected areas, including a commitment to no mining and exploring in UNESCO World Heritage sites;
- Contributing to the conservation of nature and applying the mitigation hierarchy to assess our impacts to nature, with an ambition of no net loss of biodiversity for new impacts;
- Effectively reclaiming land for which operations have concluded, and responsibly planning for closure of our mining and processing sites.
- Respecting and protecting the culture and heritage of our host communities and Indigenous Peoples;
- Supporting meaningful collaborative engagement with our stakeholders regarding our environmental performance;
- Working with our host governments to support development of laws and regulations, with resulting operational permits, that collectively provide meaningful and scientifically sound safeguards for the environment, including processes that support stakeholder participation;
- Educating and training employees and contractors to carry out tasks in an environmentally responsible manner;
- Remediating historical sites where our companies are responsible; and
- Regularly reviewing our environmental performance and publicly reporting on our progress.

Every employee and contractor of FCX and its subsidiaries is expected to follow this policy and report any concerns through FCX communication mechanisms, including those published in the Principles of Business Conduct and Supplier Code of Conduct, and the community grievance mechanism, as applicable. This Policy may be amended or supplemented from time to time by management and will be submitted periodically to the Corporate Responsibility Committee of the Board of Directors for review and approval.
