Responsible Tailings Facility Engineer (RTFE)

Freeport-McMoRan Bruce Mine Site, AZ, USA

Dear Tamara,

**RE:** Freeport-McMoRan Inc. ("FCX")

Freeport McMoRan Bagdad Inc., Bruce Mine Site, AZ, USA

Abridged Version of the Full GISTM Independent Assurance Verification Report

Please find hereafter the final abridged version of the full report noted in the subject line. The GISTM independent verification for Freeport McMoRan Bagdad Inc., for Bruce Mine Site, AZ, USA (Freeport-McMoRan) Tailings Storage Facilities (North Tailings Impoundment, South Tailings Impoundment, and East Tailings Impoundment) took place July 23 and 24, 2025 with the site visit completed on October 14, 2024. A final full report was submitted to Freeport-McMoRan Inc. ("FCX") on September 15, 2025, under a separate cover.

We thank you for entrusting our team with this important task.

Kind regards,

Doina Priscu, M.Eng, P.Eng (BC), F.E.C.

Project Manager

Principal Engineer – Mining Environment, Director

Priscu and Associates Consulting Engineers Inc.

## **Scope of the Independent Verification**

Priscu and Associates Consulting Engineers Inc. ("PACE") was retained by Freeport-McMoRan ("FCX") to third-party independent undertake assurance а Verification") verification (the "Assurance of the implementation level of the Global Industry Standard on Tailings Management ("GISTM") at the Bruce Mine Site Tailings Storage Facilities (the "TSFs"), operated by Freeport McMoRan Bagdad Inc., in AZ, USA (Bruce Mine Site ) about 160 Km. northwest of Phoenix, Arizona, USA, in accordance with the scope as agreed by PACE and FCX. The Assurance Verification took place July 23 and 24, 2025, with a final full report submitted to FCX on September 16, 2025.

#### **Assurance Level and Criteria**

PACE conducted the Assurance Verification in a manner PACE considers to be consistent with leading practices and expectations as per "IAASB - ISAE 3000 (Revised) Assurance Engagement other than Audits and or Reviews of Historical Financial Information, 2013 (revised 2015)" with a limited level of assurance. The Assurance Verification provided by PACE was conducted with the intention to be of the highest level of quality, by highly trained and specialized independent verifiers that are experienced professionals in their respective field of practice.

The Assurance Verification was conducted against the 77 requirements (the "77 Requirements", each "Requirement" with specific set of criteria) set forth in the International Council of Mining & Metals Conformance Protocols, published in May 2021 (the "ICMM Conformance Protocols").

The ICMM Conformance Protocols provide operators and independent third parties with clear criteria, derived from terms defined by GISTM, which enable such operators and independent third-parties to assess conformance against applicable standard requirements.

In all cases, the verification procedures used by PACE were evidence-based. However, a certain level of interpretation, reasonableness, adaptation, and judgement (engineering and otherwise) was used, as each tailings facility in the world is unique in its social, environmental, and technical context, design, operation, and management.

# Our Approach to Conducting the Independent Verification

PACE has established a structured, well-defined approach to independent verification of the GISTM implementation, used consistently throughout all its engagements. The multi-step methodology used in the Assurance Verification included (among other) the following:

- Site Visit was conducted on October 14, 2024, when PACE Team was in Bagdad, AZ, 2024.
- An introductory session provided by FCX to PACE to assist PACE in understanding the document presentation, document storage and search system.
- Virtual meetings with FCX's corporate team to assist PACE in understanding FCX's various corporate documents and approaches associated with technical context, social, environmental, and risk management processes.
- An independent review of the FCX self-assessment and the supporting documentation by PACE representatives of the three inactive TSFs (North Tailings Impoundment, South Tailings Impoundment and East Tailings Impoundment) that are within the scope of the Assurance Verification engagement.
- Virtual meetings and presentation session on July 23 and 24, 2025, given by Bruce Site staff and their consultants to PACE representatives, regarding the self-assessment based on the 77 Requirements, and how they apply to the three TSFs. Each Requirement (and associated criteria from the ICMM Conformance Protocol) included a reference to one or more documents, or to a section of a report, provided as evidence. In this process, over 100 documents were submitted by FCX and Bruce Mine Site and reviewed by PACE.
- Completion of the draft report (the "Draft Report") by PACE, inclusive of the conformance level ratings for each of the 77 Requirements.
- Factual review by FCX of the assumptions made by PACE in the Draft Report, and, where necessary, submission of an action plan by FCX's management team to either improve, reach, or maintain full conformance in GISTM implementation. Bruce Mine Site did not require any action plan for the TSFs under this Verification.
- Submission of the signed-off Assurance Verification final reports to FCX's Accountable Executive and the Bruce Mine Site management team.

Completion of this Independent Assurance Verification did not exclusively rely on the self-assessment completed by FCX and Bruce Mine Site operational teams. Such selfassessments were used in the context of guiding the overall process and streamlining the discussions and the evaluations.

PACE team conducted its own independent evaluations and reviews of the evidence and documentation presented by FCX. To that extent, the process should be considered a third-party independent assurance verification, equivalent to, or more comprehensive than a validation.

#### **Description of Conformance Levels**

The ICMM Conformance Protocols (May 2021) use a similar approach to demonstrating conformance with GISTM as those presented in the ICMM Assurance and Validation Procedure document (updated June 2023). The possible outcomes for the third-party independent assurance verification of each individual Requirement are:

- a. "Meets": systems and/or practices related to the Requirement have been implemented and there is sufficient evidence to demonstrate the Requirement is being met. Wording or definitions may not be identical, but the intent and outcome are the same. No gaps were identified that would materially impact the overall quality implementation of GISTM.
- b. "Partially Meets": systems and/or practices related to meeting the Requirement have been partially implemented, and/or select evidence may be missing. The GISTM Requirement is partially addressed, with considerable effort acknowledged in the implementation of this requirement. Minor gaps or weaknesses were identified that may impact the quality implementation of GISTM. Several document updates and/or sign-offs are needed for full alignment and conformance with GISTM.
- c. "Does Not Meet": systems and/or practices required to support the implementation of the Requirement are not in place, and/or cannot be evidenced, and additional work is needed for partial or full conformance. Major gaps were identified that will impact the quality implementation of GISTM.
- d. "Not Applicable": this specific Requirement is not applicable to the current context and/or stage of the asset.

### **Summary of the Conformance Results**

PACE team completed the evaluation and reporting for all 77 Requirements of the GISTM. While GISTM groups the Requirements in topics and principles, there is no

reporting by groupings of principles. In addition, there is no averaging and no overall rating for any of the TSFs, since all Requirements are equally weighted.

The three facilities under this verification were North Tailings Impoundment, East Tailings Impoundment, South Tailings Impoundment which constitute the Bruce Mine site TSF. The three TSFs have been inactive for over three decades; they are connected and adjacent to each other, they share the same governance systems and management teams, risk management framework, and supporting evidence was submitted in many situations jointly. Only one self-assessment was submitted for these three facilities that constitute the Bruce Tailings Storage Facilities (TSFs).

Existing Bruce TSFs conformance levels (for North Tailings Impoundment, East Tailings Impoundment, South Tailings Impoundment) are summarized as follows:

Meets	Partially Meets	Does Not Meet	N/A	Appli- cable req's	Total no. of req's
63 (100%)	0 (0%)	0 (0%)	14	63 (100%)	77

#### **Areas of Non-Conformance or Material Impact**

PACE did not identify any Requirement as "Does Not Meet" or "Partially Meets". The Assurance Verification conducted by the PACE team did identify the following Requirements as "Not Applicable":

- Requirement 1.2: requirement relates to FPIC (Free Prior and Informed Consent) for NEW facilities. None of the three facilities are new facilities.
- Requirement 3.3: requirement relates to assessing impacts of NEW facilities. None of the three facilities are new facilities.
- Requirement 5.5: requirement relates to design of each stage of the tailings storage facility. The three TSFs are not new, nor in expansion stages. They are all three inactive for over three decades.
- Requirement 5.8: this requirement relates to the unavoidable community pre-emptive/involuntary resettlement. This does not apply as there are no catastrophic credible failure modes at Bruce TSFs, and no potential community impacts.

- Requirements 6.2 and 6.3: these requirements related to quality of construction and construction records. Bruce TSFs are not subject to any construction or expansion. They have been inactive now for over three decades.
- Requirements 6.5: this requirement refers to Change Management aspects; the Bruce TSFs are all inactive, no deposition occurred since the 1980s
- Requirements 13.3, and 13.4: these requirements relate to FCX and Bruce Mine Site engaging with public sector agencies, and community focussed measures, as well as providing immediate response to save lives, supply humanitarian aid and minimise environmental harm from a TSF failure. These are not applicable as there are no catastrophic credible flow failure modes associated with the Bruce TSFs.
- ➤ Requirements 14.1, 14.2, 14.3, 14.4, and 14.5: they relate to preparing for long term recovery in the event of catastrophic failure, and implementing recovery and restoration plans for potential impacts from a catastrophic tailings facility failure. These requirements are not applicable as there are no catastrophic flow failure modes associated with the Bruce Mine Site TSFs, and no potential for lifethreatening impacts on community members.

Following the completion of the Assurance Verification and the conformance levels identified, no additional actions or commitment letters are required at this stage from FCX. Maintaining the full conformance with GISTM is a corporate commitment, clearly stated and presented in the FCX Policy and internal corporate guidelines.

#### **Limitations and Other Matters**

This Assurance Verification report is a summary of the extensive independent assurance process undertaken by PACE at Bruce Mine Site.

PACE has not performed assurance procedures in respect of the documentation or information provided by FCX and assumes the accuracy and completeness of such documentation and information. The Assurance Verification reflects the conformance status at the time PACE undertook the Assurance Verification process.

This report prepared by PACE does not extend to any disclosures or assertions made by FCX relating to future performance of the Bruce TSFs, and does not imply, nor it is expected, that the determinations and findings (including, without limitation, the conformance levels) set out herein will remain the same over time.

As part of the Assurance Verification, PACE considered the quality, completeness, and content of documents provided and the effectiveness of management's internal systems and processes when determining the level of conformance. While the conformance levels for the GISTM implementation clearly reflect the quality of work completed by FCX and Bruce Mine Site team, they are not to be used to measure the safety of the TSFs and associated appurtenant structures.

The Assurance Verification is intended to be of the highest quality and to reflect most accurately possible the levels of conformance and implementation of the 77 Requirements and their criteria at the time the verification took place.

#### **Use of the Limited Assurance Verification Report**

This Assurance Verification report is being provided for information purposes only and for the sole and exclusive use of FCX and no other person or entity. Any use which a person or entity other than FCX makes of this Assurance Verification report, or any reliance on or actions taken (or omitted to be taken) by any person or entity other than FCX, are the responsibility of such other person or entity.

Neither PACE, nor its Directors, officers, shareholders, representatives, employees, contractors, agents or affiliates shall have any liability (whether under statute, in contract, in equity, in tort or otherwise) to any other person or entity whatsoever with respect to, resulting from, or in connection with, directly or indirectly, this Assurance Verification report, and no person or entity shall have any rights or claims (or basis for a claim) by virtue of this Limited Assurance Verification report.

### Statement of Independence of the PACE Team

The PACE team members and authors of this report confirm that are independent of FCX and its operations, as defined by industry best practices. The PACE team members have no relationship with FCX, other than third-party independent assurance verifiers, reviewers, or auditors. The PACE team members did always maintain impartiality during the provision of this third-party Assurance Verification, as detailed in this report.

# **Report Submission**

Submitted by Priscu and Associates Consulting Engineers Inc. and signed on September 16, 2025, at Lake Country, BC, Canada.
